

PAIROT UPDATES (SUMMER 2018)

xxter continues innovating

This summer we inform you about the firmware and the apps recently available, that of course can be downloaded free. Here are some of our improvements.

Google Home

In addition to Apple HomeKit and Amazon Alexa, Pairot is now also compatible with Google Home, Pairot has been also certified for Google Assistant.

For Google Home there are currently admitted actuators, regulators, thermostats and switches. At the time Google expand his functionality, Pairot will fastly connect with a free firmware update. 150 components can be linked to a Pairot.

Back-up

Now it's possible make back-ups manual or automatically to the xxter cloud. If it's necessary, it makes automatic back-ups of planners, scenes, presence simulators and stats / graphics every day and every week. Last 2 days and last 2 weeks are remembered. In addition, it's possible to make 3 manual back-ups, with its own description. Back-ups can be restored with the "recovery back-up" function. This function is turned on automatically after install last firmware. Of course, this function can be deactivated if you don't want to make automatic back-ups.
